EDUCATION

Concordia College

Moorhead, MN

Bachelor of Arts in Computer Science

Spring 2024

Relevant Coursework: Data Structures and Algorithms, Web Development, Mobile Application Development, Operating Systems, Database Management, Principles of Programming Languages, Computer Networks, and Principles of Software Engineering

Organization and Activities: Project Manager for Computer Science Society, ColorStack

WORK EXPERIENCE

Eide Bailly LLP

Fargo, ND

Application Developer Intern (Full Stack Development)

Jan 2024 – Aug 2024

- Developed a full-stack internal hardware lifecycle and fulfillment application that automated and streamlined employee hardware selection and IT fulfillment workflows using **Angular, TypeScript, Kendo UI, C#/.NET, REST APIs, JWT, and SQL Server**, improving process efficiency by **40%** and significantly enhancing IT team operations.
- Designed and implemented the application's **CI/CD deployment pipeline**, integrating **Git and GitHub** with **Microsoft Azure** to automate releases and enable future developers to deploy updates through a consistent, repeatable process.
- Modernized **four legacy applications** by migrating codebases from **.NET Framework 4 and .NET 6 to .NET 8**, including rewriting legacy APIs to preserve existing internal business functionality on the newer framework.
- Updated application components, dependencies, and configurations, resolving framework-compatibility issues and improving application performance by **approximately 25%** across completed migrations.

Doosan Digital Innovation America, LLC

West Fargo, ND

Application Developer Co-op

May 2023 – Dec 2023

- Implemented **full-stack enhancements** across production reporting applications using **Angular, TypeScript, C#/.NET, and Oracle SQL**, including revamping a **work-in-progress (WIP) reporting screen** by updating frontend components, backend logic, and database queries while improving data retrieval, access control, and application performance with **GitHub Copilot**.
- Diagnosed and resolved manufacturing-data and workflow issues in **Apriso MES**, tracing **Oracle SQL logic** to correct missing, duplicated, or stalled production records and reduce troubleshooting time by **approximately 25%**.
- Enhanced work-order and production-order processing workflows in Apriso, supporting order-status changes, quantity validation, and shop-floor execution using Oracle SQL queries, stored procedures, and functions.
- Served as **Deployment Manager across 7 factory sites**, managing releases of Apriso workflows, Oracle SQL changes, and full-stack reporting applications from pre-production to production while maintaining deployment consistency across all sites.

PERSONAL PROJECTS

Pokedex Web Application ([GitHub Frontend](#)) ([GitHub Backend](#))

Jan 2024 – Apr 2024

- Engineered a full-stack Pokedex web application using **Next.js (React), JavaScript, and Material UI** for the frontend, **Java Spring Boot** and **Spring MVC** for RESTful backend services, and **PostgreSQL** for relational data management, with **Docker** for containerization.
- Integrated **Firebase Authentication** with Google Sign-In and developed persistent user functionality for capturing Pokémon, alongside pagination, name-based search, sorting, and filtering features.
- Designed and populated **PostgreSQL** data models for Pokémon, types, abilities, and related attributes, preprocessing CSV datasets with **R** to support efficient application data storage and retrieval.

Brook's Financial Observatory ([GitHub](#)) ([Website](#))

Aug 2026 – Sep 2026

- Developed a financial analytics dashboard using **Next.js, React and JavaScript**, featuring company search, annual and quarterly statements, interactive charts, financial filters, and CSV exports.
- Built **REST API endpoints** integrating Financial Modeling Prep with input validation, server-side API key handling, caching, and error handling; deployed on **Vercel** with eight automated tests covering financial calculations, search, and data processing.

Computer Science Society Club Website ([GitHub](#)) ([Website](#))

Aug 2023 – Sep 2023

- Designed a dynamic club website using **Node.js, Next.js (React), TypeScript, Chakra UI and EmailJS**, increasing member engagement and participation.

TECHNICAL SKILLS

Programming Languages: Java, C#, Kotlin, JavaScript, TypeScript, C++, C, R, Python

Frameworks: React, Next.js, Angular, .NET, Spring Boot, Chakra UI, Kendo UI, Material UI

Databases: PostgreSQL, Oracle SQL, SQL Server

AI Development Tools: GitHub Copilot, ChatGPT

Developer Tools: Visual Studio Code, Visual Studio, IntelliJ, Apriso MES, Supabase, Docker, Kubernetes, Node.js, Microsoft Azure

Version Control and CI/CD: Jira, GitHub, SourceTree, GitLab CI/CD, Confluence, ServiceNow, Azure DevOps
